New: Create a wish list for all your projects!
An overview of all your current projects at a glance

The My projects environment gives you an overview of all your current projects, which you can also edit here. When logged in, you will find the environment at the top of the screen, where the former Wishlist used to be.

### Edit project: change project name and delete project

Via the edit icon, you can easily edit the name of your project. Here you also have the option to delete the project. When you want to delete a project, to confirm this you will be asked if you are sure, so that you do not accidentally delete your entire project.

Create new project

When you create a new project, you give the project a name and immediately add an initial location to your project. This location indicates where selected products will be placed in your project. You can create up to fifty projects and in the My projects environment these are sorted alphabetically.

A quick look at the contents of your projects

In the My projects environment you immediately get a preview of your projects. Here you can see how many locations your project has and how many products your entire project contains. You will also see an image of the five products you most recently added to the project.

You manage your projects and locations all by yourself

You have the option of dividing your ongoing projects into various locations. These indicate where the selected products will be placed in your project. Each project must have at least one location. When you select a project, you get an overview of all locations within that project.

Edit location: rename and delete location

Via the edit icon you can easily change the location name or delete the entire location. When you want to delete a location, to confirm this you will be asked if you are sure, so that you do not accidentally delete all products.

Create new location

Every project contains at least one location that you create yourself. Via the 'Create new location' button you can easily add additional locations to your projects. There is no maximum number of locations per project. The locations are sorted in order of creation: the location you created first is at the top and the location you created last is at the bottom.

## View the content of your locations

You can use the + sign to expand and collapse the locations. When expanded, you have a complete overview of the content of your locations. This allows you to see at a glance which desired products you have added to the location. Here you can also easily adjust the desired number of products.

Add products to cart

You can choose to add one or more products to your cart by clicking the green price button. You can also add an entire project to your cart at once. This will add all (available) products from that project to your cart. The products will not be removed from your project.

Find products by product number

The filter allows you to search for products by product number. This gives you an overview of all locations within a project which contain the product you are looking for. It is possible to search by an entire product number for a specific product or by part of the product number.

Add desired products to locations quickly and easily

While shopping in our web shop, you can quickly add a desired product to a project and location. In total, a project can contain 200 products.

Add products to a project and location

By clicking on the grey heart, you indicate that you want this product, and you can add this product to a project and location. Once a product has already been added to a project, the heart icon is green.

Create project

If you have not yet created a project, you will be prompted to create a project name. Then add a location and the desired product will be added to this location immediately.
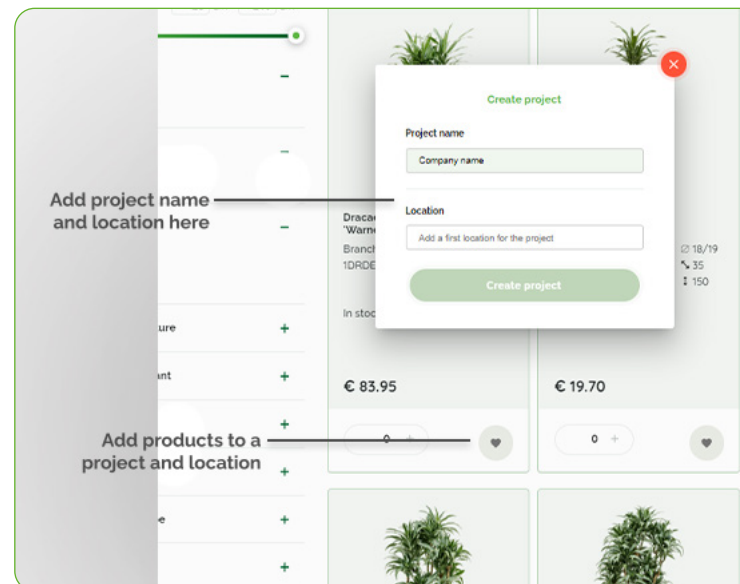

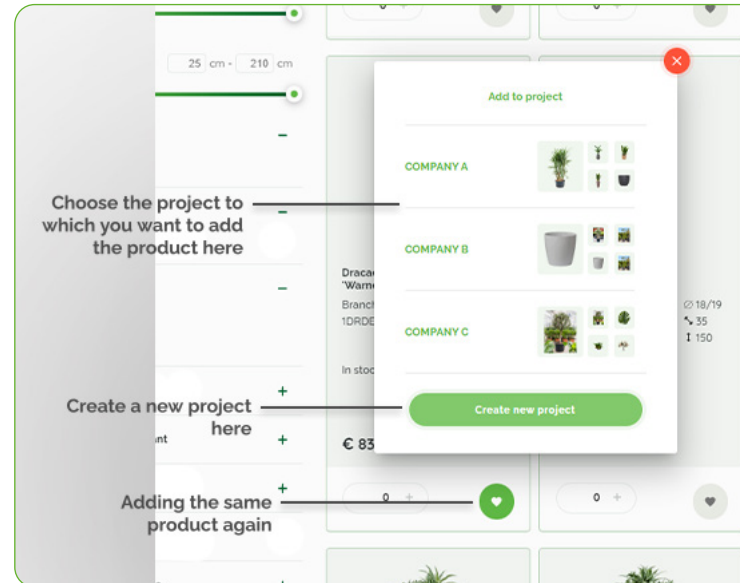

Add product to existing project

If you have already created one or more projects, select the project and location to which you want to add the product. You will see confirmation of this at the bottom of the screen.

Add product to a new project or location

If you want to add a product to a new project or location, you can create it via 'Create new project' or 'Create new location'.
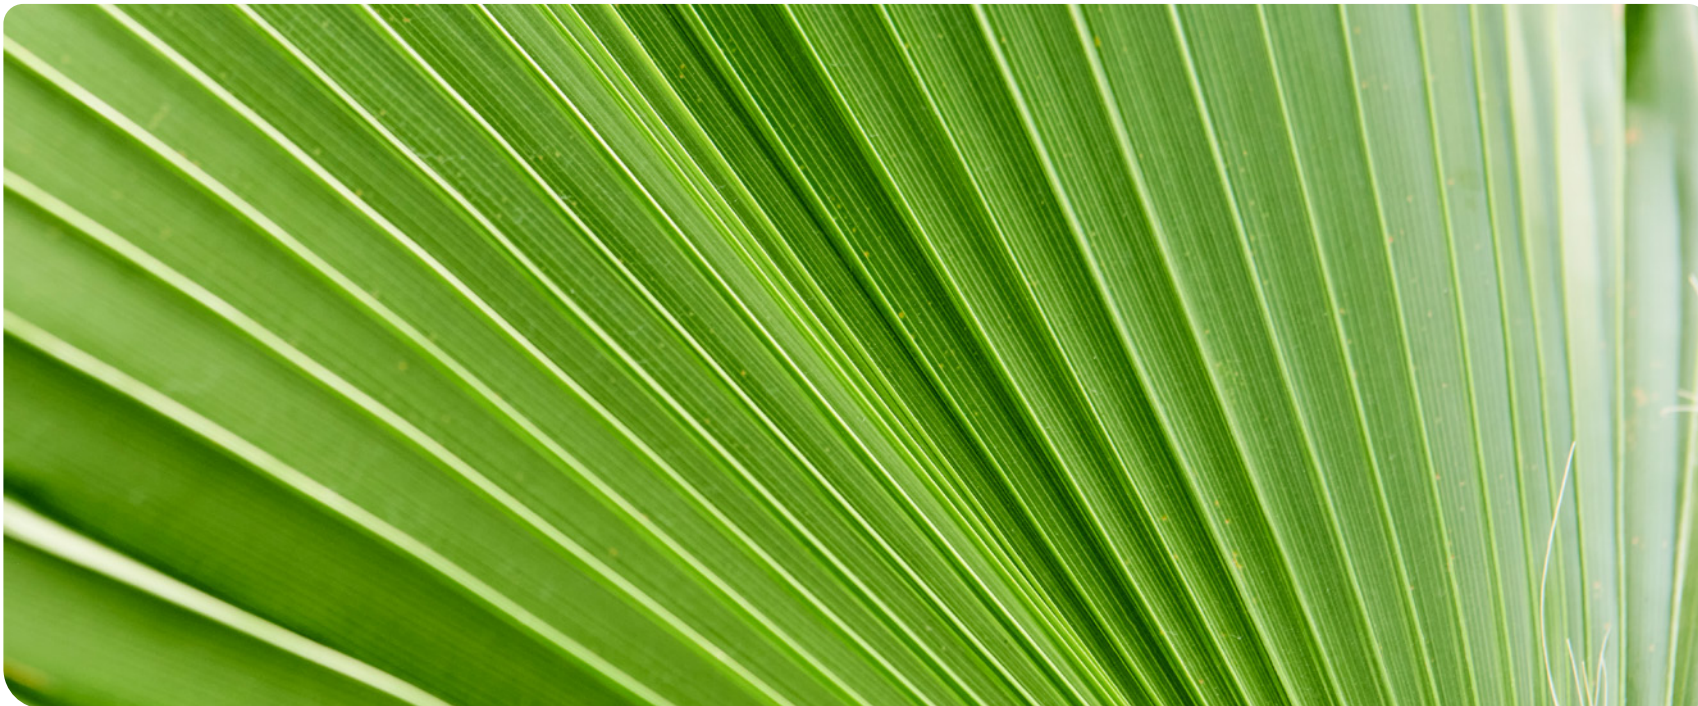

Adding the same product again

When a product is placed in a location, the grey heart turns green in colour. When you want to add this same product to another project, you can click on the green heart. This restarts the process. If you want to remove the product from the location, you can do so via the My projects environment.

Were you using the Wishlist? This changes for you

If you were previously using the Wishlist, the products in that list have not been lost. They have been automatically migrated to the new My projects environment. Here, a project and a location have now been created for you with the names 'Project name' and 'Location name' respectively. All products that were on your wish list can now be found here. You can edit the project and location names yourself.
